

Carbon and carbonless Water filter systems

Water filtration systems

Follett offers water filtration systems for ice and water dispensers and ice machines to address a variety of requirements.

Carbonless water filter system

Carbonless filters allow chlorine and chloramines from municipal water systems to pass through, to retain the disinfection capabilities of your incoming water while removing cysts and 99.9% of all particles 0.5 micron and larger in size. Scale inhibition protects machine from scale damage, reducing energy and service costs.

Carbon water filter system

Available in standard (5,000 gallons) and high capacity (17,500 gallons), these filters provide multi-level filtration to remove chlorine, taste, odor, cysts, and 99.9% of all particles 0.5 micron and larger in size at low pressure drops across the filter. Scale inhibition protects the machine from scale damage, reducing energy and service costs.

Pressurized water sanitizing kit

Follett's industry-first pressurized water sanitizing kits sanitize the internal pressurized water lines of the ice and water dispenser. The procedure facilitates a complete sanitization of the entire ice and water dispenser when performed in conjunction with the standard ice machine and dispenser cleaning/sanitizing process.
