

Horizon Elite™

self-contained 710 series Chewblet® ice machine

Features

Horizon Elite

- 710 series - up to 759 lb (345 kg) in 24 hours
 - automatically transport ice through a tube with RIDE® technology from up to 75' (22.8 m) away
 - chewable, compressed nugget ice is preferred over cubes¹
 - Chewblet ice dispenses reliably from ice and beverage dispensers
 - available with approximately 1.00" (2.54 cm) long standard Chewblet ice or optional 3/8" (0.95 cm) long Micro Chewblet™ ice
 - quiet production without noisy harvest cycles

Revolutionary, scale inhibiting design

- produces ice that has 15% the TDS of the incoming water for optimum dispensing and long life in drinks
- quarantines and regularly expels scale producing dissolved solids to dramatically reduce scale buildup
- increases time between descaling and reduces or eliminates the need for expensive scale treatment
- saves 35% water compared to comparable cubers
- meets 2018 Department of Energy regulations
- all models Energy Star certified

Durable, attractive ice machine

- regular bearing inspection or replacement is not required
- upgraded, easy-to-read LED operating status and diagnostic display

Designed with sanitation in mind

- Agion® silver-based antimicrobial product protection of key ice and water contact components²
- floatless, sealed design inhibits formation of biofilms
- semi-automatic cleaning and sanitizing system

Warranty

- 3 years parts and labor, 5 years compressor parts

Certifications

¹ Independent third party studies. Contact Follett for details.

² Disclaimer: Antimicrobial protection is limited to the treated components and does not treat water or ice.

1 – Locating the ice machine

Horizon Elite self-contained Chewblet ice machines allow top-mounting or mounting in a base cabinet, on a wall or on a floor stand up to 75' (22.8 m) from the dispenser or ice bin with RIDE technology. In-cabinet mounting (RIDE applications) require special attention to service access, unit ventilation and ice tube runs (see pages 4-8).

2 – Undercounter/in-cabinet mounting

Cabinet details

Important specifier notes

1. Cabinet door opening must meet minimum size requirements shown and be free of obstructions to allow ice machine to slide out (no lip or utilities to block removal).
2. Cabinet base must be capable of supporting ice machine and allow ice machine to rest flat on cabinet bottom.
3. No counter supports, electric or plumbing can run in front of the ice machine.

3 – Undercounter/in-cabinet mounting and ventilation

Using Follett supplied grilles

Horizon Elite ice machines can be installed undercounter/in-cabinet to fill bins or dispensers using RIDE technology. Care must be taken to ensure proper cabinet venting to avoid recirculation of hot air. Improper venting can cause ice machine outages.

Important specifier notes for using Follett supplied grilles

1. The supplied exhaust grille must be located at least 18.00" (45.7 cm) from the supplied air intake grille (exhaust air must not recirculate with intake air).
2. Cabinet interior must be open to allow for unrestricted exhaust air flow.
3. Ice transport tube needs minimum 1/4" per foot (2 cm per meter) pitch toward ice machine and should be secured to prevent dips and traps from forming.
4. Cabinet door must mate directly to air intake gasket.
5. Cabinet interior must provide a minimum clear space of 24.50" deep (62.2 cm) by 22.25" high (56.5 cm).
6. Cutout for supplied grilles must meet minimum size requirements shown above.
7. Utilities should be conveniently located as shown.

3 – Undercounter/in-cabinet mounting and ventilation (continued)

Using grilles by others/alternate cabinet ventilation

Cabinets with ventilation or louvers other than those provided require special consideration to provide proper ventilation. Recirculation of hot air will reduce ice machine performance and can cause ice machine outages.

Minimum open air space

Important specifier notes for using grilles supplied by others/alternate cabinet ventilation

1. Exhaust must be at least 18.00" (45.7 cm) from air intake (exhaust air must not recirculate with intake air).
2. Cabinet interior must be open to allow for unrestricted exhaust air flow.
3. Ice transport tube needs minimum 1/4" per foot (2 cm per meter) pitch toward ice machine and should be secured to prevent dips and traps from forming.
4. Ducting must be provided if cabinet door does not mate directly to air intake gasket.
5. Cabinet interior must provide a minimum clear space of 24.50" deep (62.2 cm) by 22.25" high (56.5 cm).
6. Grilles by others must meet minimum requirements for open air space shown above.
7. Utilities should be conveniently located as shown.

4 – Horizon Elite ice machine mounting accessories

Optional wall mount bracket	Optional machine stand	Important specifier notes
		<ol style="list-style-type: none">1. For secure wall mounting, specify optional wall mount bracket.2. Wall and fasteners must support the weight of the ice machine, bracket, supply water and ice. Use of a backing board may be required with hollow wall construction.3. Machine stand mounting adds 6.88" (17.48 cm) to height of ice machine.4. No dips in tube routing allowed.5. Ice transport tube needs minimum 1/4" per foot (2 cm per meter) pitch toward ice machine and should be secured to prevent dips and traps from forming.

5 – Horizon Elite drain - specifier guidelines

Drain details	Important specifier notes. Where code allows, follow recommendation below.
	<ol style="list-style-type: none">1. Connect the silicone tubing to the ice machine 3/4" drain barb ❶.2. Assemble the 3/4" barb x 3/4" FPT to the 3/4" MPT x 1" slip. Connect the other end of the silicone tubing to the 3/4" barb ❷.3. Connect the 1" slip fitting to the 1" stand pipe/drain ❸. <p>Note: Minimum 8" radius on silicone drain line. Drain line from the ice machine must have at least 1/4" per foot pitch (6.4 mm/0.3 m).</p> <p>Note: Stand pipe/drain provided by others. All other components provided with ice machine.</p>

6 – Horizon Elite ice tube runs - specifier guidelines

Long tube runs for RIDE remote ice delivery equipment

The diagram illustrates the installation of an ice transport tube in a room. On the left, a beverage dispenser is connected to the start of the tube. The tube runs horizontally along the ceiling, supported by straps. A minimum turn radius of 6.00" (15.24 cm) is indicated at the start. The maximum distance between support straps is 2' (60.9 cm). The tube has a 1/4" slope towards the wall-mounted ice machine on the right. A slope triangle shows 1/4" rise over 1' run, equivalent to 2 cm per meter. The tube is labeled as 1 3/16" OD, 2 1/8" OD with insulation.

Important specifier notes

- 75' (22.8 m) maximum ice transport tube run.
- Tubing routing bends must have a 6.00" (15.24 cm) radius or larger.
- Dips and traps are not allowed. If not supported from underneath, secure insulated ice transport tube at least every 2' (60.9 cm) to prevent drips and traps.
- Relative humidity levels above 80% in areas where the ice machine or ice transport tube is located may produce excessive condensation that will cause water damage.
- Contact factory for recommendations on running tubing through a decorative soffit or chase.
