

Scale-inhibiting ice machine **Horizon Elite™** Series

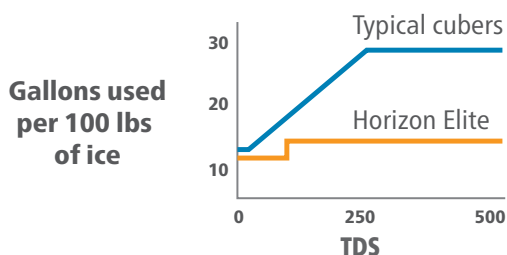

Horizon Elite™ is a revolutionary design that protects against scale to substantially reduce life cycle cost

Water with high levels of dissolved minerals, also called Total Dissolved Solids (TDS), causes scale buildup, clogged drain lines and soft ice that can jam dispensers.

With Horizon Elite, fresh inlet water forces dissolved solids to the reservoir where they are isolated and expelled in low volume flushes.

50% less water

Lower cost of ownership

- Significantly reduces or eliminates the need to descale the ice machine between normal sanitizing intervals
- Reduces or eliminates the need for reverse osmosis or other expensive scale control in scale-prone waters
- Produces purer ice to provide trouble-free dispensing
