Installation, Operation and Service Manual

Welcome to Follett

Follett equipment enjoys a well-deserved reputation for excellent performance, long-term reliability and outstanding after-the-sale support. To ensure that this product delivers that same degree of service, we ask that you take a moment to review this manual before beginning the installation. Should you have any questions or require technical help at any point, please call our technical service group at: Follett Europe +48 (58) 785-6140 or Follett U.S.A. +1 (610) 252-7301.

Before you begin

After uncrating and removing all packing material, inspect the equipment for concealed shipping damage. If damage is found, notify the shipper immediately and contact Follett Corporation so that we can help in the filing of a claim, if necessary.

CAUTION

- Top is not fastened to bin
- Avoid excessive tightening force when connecting to the bin drain fitting
- Do not apply excessive heat if any sweating of fittings is necessary. Heat conduction through metal may melt threads in plastic drain fitting.

Installation

1. Remove all packing material from bin.
2. Remove all tape and temporary fastenings from door assemblies and outside of bin.
3. Remove top from bin.
4. Remove set of four legs and any other accessories packed inside bin.
5. Lay bin on back, being careful to protect finish, and remove bolts holding skid to bin.
6. Screw legs into tapped holes in bin bottom and tighten to seat legs well against bottom.
7. Set bin upright.
8. Reinstall top onto bin.
9. Remove protective paper from stainless steel exterior.
10. Move bin to permanent location.
11. Adjust "foot" at bottom of each leg to level bin in both directions.
12. Mount icemaker(s) onto bin in accordance with icemaker manufacturer's instructions.
13. Connect drain line to 1" FPT female fitting located in bottom of bin.
14. Make final connections to icemaker.

Installing icemaker drain

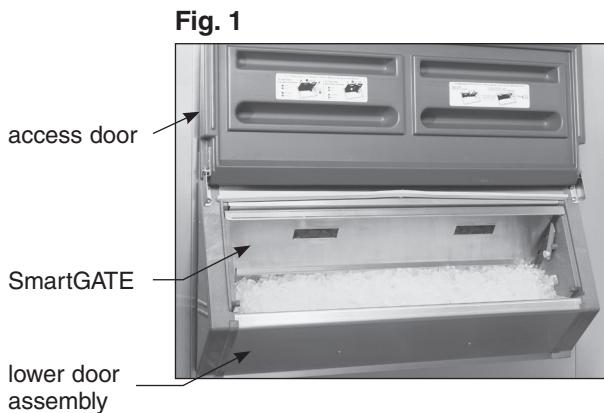

(Required for some icemaker applications only) Some icemakers require a special drain system. For these machines Follett predrills the hole and provides the 3/4" straight threaded drain fitting to be installed through the hole. To install the fitting:

1. Remove plastic nut on fitting
2. From inside bin (liner side), insert threaded portion through hole provided in side of bin.
3. Replace plastic nut on threaded portion and tighten against outside of bin.
4. Connect supplied tubing to icemaker drain connection after installing icemaker.

Removing lower door assembly

(Only required for access through narrow door)

1. With door in closed position, remove phillips head screw and washer from hinge area on each side of lower access door.
2. Insert flat head screwdriver between door and hinge bracket on one side of door and gently push against bracket to provide room for door stud to clear bracket.
3. Remove access door.
4. Pull up on SmartGATE and remove gate.
5. Remove screws along top of door assembly.
6. Pull forward on top of assembly and lift to remove.

Reinstalling door assembly

1. Reinstall lower door assembly in bin opening.
2. Reinstall screws in hood at top of door assembly.
3. Reinstall SmartGATE in side panel tracks and push down to seat.
4. With door in closed position, insert one door stud through hinge bracket, install washer, screw and tighten.

Note: For proper operation the access door must be reinstalled in the closed position.

5. On other side, insert screwdriver between door and hinge bracket and gently push against bracket to provide room for door stud to clear bracket.
6. Reinstall washer and screw in lift door and tighten.
7. Check door to ensure proper operation.

Operation

SmartGATE operation

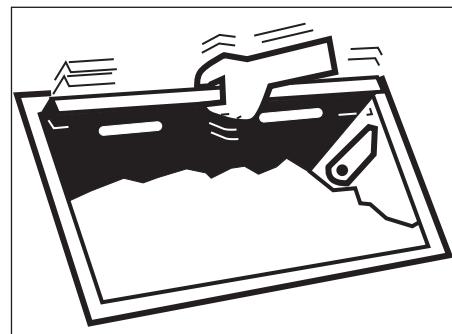

Follett's unique SmartGATE controls the flow of ice into lower door assembly area for removal with either a scoop or shovel. SmartGATE can also be adjusted and locked at one of several levels to accommodate flow characteristics of different types of ice.

Bin is shipped with SmartGATE in full down position. SmartGATE can be raised and locked in higher position for better ice flow or when more access is needed.

If more ice is needed in lower door area

1. Use full-length handle at top of SmartGATE to gently lift and jiggle SmartGATE to encourage ice to flow into access area of the bin (Fig. 2). (Loose ice will cascade into lower door area.)
2. When adequate ice has flowed, push SmartGATE back down.

Fig. 2

When more access is needed or to encourage flow of less "slippery" ice.

1. Lock gate at higher level by pulling up and holding SmartGATE at correct level, and pushing tapered end of catch into nearest hole in gate (catch will automatically release when you pull up).
2. To release catch, pull up on SmartGATE.

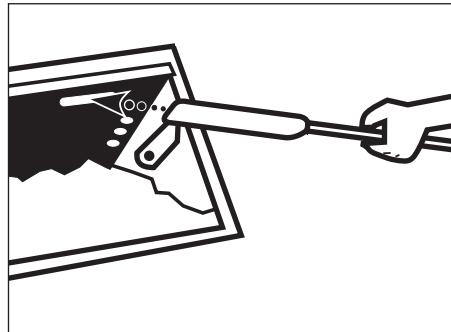

Using ice probe tool accessory

Ice probe tool is an optional accessory that can be ordered directly from Follett. If your bin has been ordered with ice probe tool accessory, mount probe for easy access on either side of bin with bracket provided.

Using ice probe

If there is adequate ice in bin but lower door area is not filled with ice, it may be that ice has congealed in bin and cannot flow. This can often be remedied by quickly jiggling SmartGATE several times (see preceding SmartGATE operation). If problem continues, probe tool can be inserted through rectangular openings in SmartGATE and agitated back and forth to break up congealed ice mass (Fig. 3).

Fig. 3

⚠ CAUTION

Use probe tool only as described above. To avoid possible injury, keep head and face clear of lower door area and tool at all times. Do not use probe tool for other purposes.

Technical assistance available toll free

Should you have any questions installation or maintenance of Follett ice storage bins, please call our technical service group at: Follett Europe +48 (58) 785-6140 or Follett U.S.A. +1 (610) 252-7301.

Cleaning

Interior of bin must be cleaned and sanitized prior to use and should be cleaned on routine basis during use.

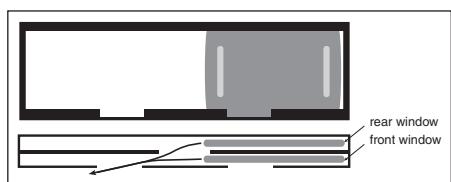

Interior bin cleaning

Follett single door upright ice storage bins with SmartGATE are equipped with polyethylene liner walls and stainless steel bottoms which should be cleaned and sanitized periodically with *Ecolab Mikro-chlor Cleaner or any product suitable for use in a food zone.

Important: Follett Corporation recommends installing a properly-sized, activated carbon (charcoal) water filter on water supply to icemaker to remove chlorine.

1. Remove upper inspection windows by sliding windows to one side. Grasp the end of the front window and pull toward you as the window is slid to the opposite side. Repeat for rear window.
2. Wash bin walls, hopper, access door plate and partition (if any), rinse and sanitize.

Fig. 4

Exterior bin cleaning

Exterior stainless steel surfaces can be cleaned with a stainless steel cleaner such as *3M™ Stainless Steel Cleaner & Polish or equivalent.

*Mikro-chlor is a trademark of Ecolab Incorporated in the US and other countries.

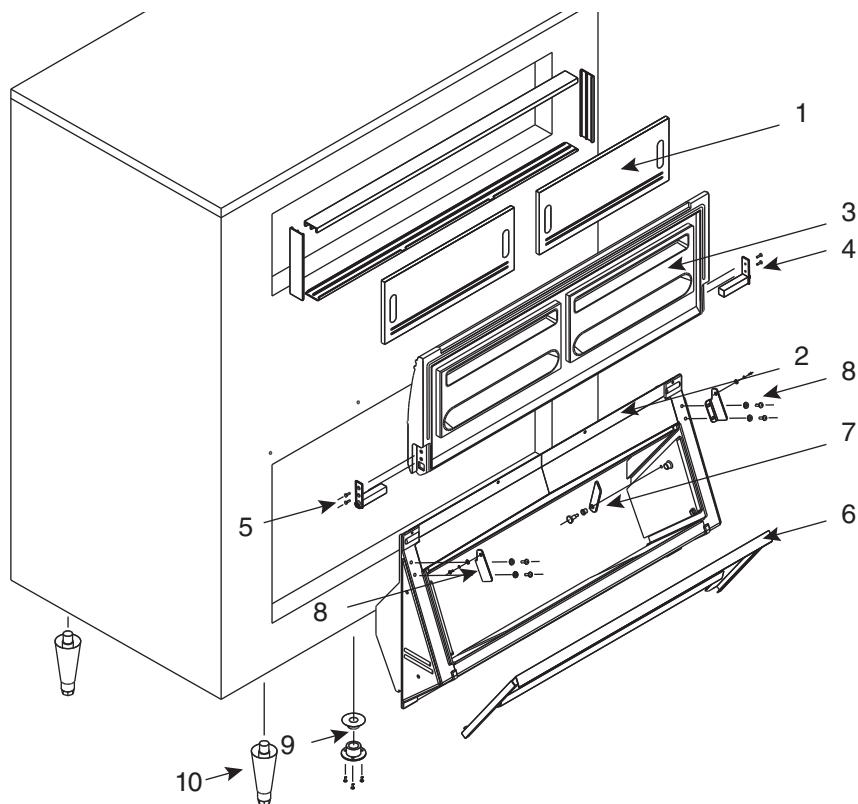

*3M is a registered trademark of 3M Company in the US and other countries.

Totes is a trademark of Follett Corporation.
